

AIM

To write a C program to copy the contents of one file into another file and display the copied output.

PROCEDURE

1. Start the program.
2. Declare file pointers for source and destination files.
3. Open the source file in read mode.
4. Check whether the source file is opened successfully.
5. Open the destination file in write mode.
6. Check whether the destination file is opened successfully.
7. Read characters from the source file using `fgetc()`.
8. Write each character into the destination file using `fputc()`.
9. Continue until End Of File (EOF) is reached.
10. Close both the files.
11. Display a success message.
12. Stop the program.

PROGRAM

```
/*
File Name      : file.c
Author         : Monish Kanna
Purpose        : To copy the contents from one file to another file using C file handling functions.
*/
#include <stdio.h>
int main()
{
    FILE *sourceFile, *destinationFile;
    char ch;
    sourceFile = fopen("source.txt", "r");
    if (sourceFile == NULL)
    {
        printf("Cannot open source file.\n");
        return 1;
    }
    destinationFile = fopen("destination.txt", "w");
    if (destinationFile == NULL)
    {
        printf("Cannot open destination file.\n");
        fclose(sourceFile);
        return 1;
    }
    while ((ch = fgetc(sourceFile)) != EOF)
    { fputc(ch, destinationFile); }
    fclose(sourceFile);
    fclose(destinationFile);
    printf("Contents copied successfully from source.txt to destination.txt\n");
    return 0;
}
```

OUTPUT

```
Monish_kanna_week3_practice4 > ≡ source.txt
1   Hello AMI team!!
2   I am Monish Kanna
```

```
PROBLEMS  TERMINAL  OUTPUT  PORTS
● PS C:\AMI C PROGRAM> cd "c:\AMI C PROGRAM\Monish_kanna_week3_practice4\" ;
  Contents copied successfully from source.txt to destination.txt
```

```
Monish_kanna_week3_practice4 > ≡ destination.txt
1   Hello AMI team!!
2   I am Monish Kanna
```

RESULT

The program successfully copied all the contents from the source file to the destination file and displayed the copied output correctly.
