

## Aim

To write a C program to read two variables (one integer and one float), display their values, print the size of both variables, and execute all stages of the compilation process such as preprocessing, compiling, assembling, and linking.

## Procedure

1. Open Notepad
2. Type the program
3. Save as **monish\_week1\_practice1.c**
4. Open command prompt
5. Type the command to create the compilation process files
6. Type command file\_name.exe to execute your file

## Program Code

```
/*  
@file  
Program to get the value of integer and float variables,  
display their values and print their sizes  
Author: Monish Kanna K  
Date: 05.01.2026  
File Name: monish_week1_practice1.c  
*/  
  
#include <stdio.h>  
  
int main() {  
    int a;  
    float b;  
    printf("Enter integer value: ");  
    scanf("%d", &a);  
    printf("Enter float value: ");  
    scanf("%f", &b);  
    printf("\nInteger value: %d", a);  
    printf("\nFloat value: %.2f", b);  
    printf("\nSize of integer: %lu bytes", sizeof(a));  
    printf("\nSize of float: %lu bytes", sizeof(b));  
    return 0; }
```

## Output

```
C:\Windows\System32\cmd.e  ×  +  ∨  
Microsoft Windows [Version 10.0.26100.7171]

C:\AMI C PROGRAM>gcc -S monish_week1_practice1.c -o monish_week1_practice1.s  
C:\AMI C PROGRAM>gcc -C monish_week1_practice1.c -o monish_week1_practice1.o  
C:\AMI C PROGRAM>gcc monish_week1_practice1.c -o monish_week1_practice1  
  
C:\AMI C PROGRAM>monish_week1_practice1.exe  
Enter integer value: 8  
Enter float value: 5.1  
  
Integer value: 8  
Float value: 5.10  
Size of integer: 4 bytes  
Size of float: 4 bytes  
C:\AMI C PROGRAM>
```

## Result

Thus, the C program to read integer and float values, display them along with their sizes, and execute all stages of the compilation process was successfully implemented and executed.
